

RAPTOR TRUCK BED LINER - BLACK 2K PROTECTIVE POLYURETHANE COATING

U-POL's RAPTOR Truck Bed Liner is a durable 2K polyurethane coating that provides surfaces with a protective barrier.

RAPTOR Tintable Truck Bed Liner is also available.

One Kit of RAPTOR includes:

- 4 x 750ml RAPTOR base coating
- 1 x 1L RAPTOR hardener

Features and Benefits

- Easy to use: simply FILL - SHAKE - SHOOT®.
- High coverage, up to 125 ft².
- Provides excellent UV protection.
- Waterproof - provides a water tight seal, keeping water out and eliminates the chance for rust.
- Protects against rust, corrosion salt, damp, and extreme temperatures.
- Abrasion and stain resistant.
- Dries rapidly, is flexible, and helps deaden sound and vibrations.
- Provides excellent adhesion.
- No need to wax after application.

Substrates and Preparation

Substrates	• Original Paint	• Polyester Fillers	• SMC
	• Aluminum*	• Plastic	• Glass
	• Bare Metal*	• Fiberglass*	• Concrete*
	• Galvanized*	• GRP	• Wood*
	• E-coat*		

* Some substrates require additional surface preparation before applying RAPTOR.
See Substrate Preparation section for details.

Substrate Preparation

To achieve best results with RAPTOR, good preparation is essential.

- 1 Remove all loose material and any rust from the surface to be coated.
- 2 Clean and degrease the surface.
- 3 Abrade the surface with P120-P180 abrasives.
- 4 Re-clean the surface.

RAPTOR TRUCK BED LINER - BLACK 2K PROTECTIVE POLYURETHANE COATING

- * Aluminum, bare metal, and galvanized: Prime with an etch primer, such as two coats of U-POL's ACID#8 (UP0741V).
- * Fiberglass and plastic: For optimal adhesion, use an adhesion promoter, such as U-POL's GRIP#4 (UP0799).
- * Wood and concrete: For best results, before applying RAPTOR, the surface must be sealed with a urethane, acrylic, or epoxy wood or concrete sealer. If the wood has been pre-treated or painted, clean and dry the wood before sealing.
- * OEM E-Coat: Scuff the surface with an abrasive pad then clean and degrease.

Mixing

Mixing Ratio

RAPTOR is easy to mix. Simply fill the RAPTOR coating bottle with hardener to the first ridge "A" (250ml/0.5 pints of hardener). Replace cap and SHAKE contents vigorously for at least 2 minutes. SHOOT as follows.

***** Only mix one bottle of RAPTOR at a time. Clean gun between mixes. *****

RAPTOR can be applied using U-POL's Schutz gun (UP0726) or an HVLP Gravity Gun.
Mix ratios are dependent on the type of gun used.

Mixing by volume

Pints	Coating (A)	Hardener (B)
2	28oz	8oz
1.5	21oz	6oz
1	14oz	4oz
ML		
1000	840g	241g
750	630g	181g
500	420g	121g
250	210g	60g

Mixing by weight

Grams	Coating (A)	Hardener (B)
1000g	777g	223g
500g	388g	112g
Pounds		
1.0lb	12.4oz	3.6oz
.5lb	6.2oz	1.8oz

RAPTOR Hardener
U-POL SYSTEM 20 Fast Thinners (UP242-)

GUN/1 (UP0726)
3:1
Ready to use, no thinner needed

HVLP Gravity Gun
3:1
Up to 10% to reduce the texture
About 25% more coverage

RAPTOR TRUCK BED LINER - BLACK 2K PROTECTIVE POLYURETHANE COATING

Application

Spraying RAPTOR

- 1 Remove cap from RAPTOR bottle with the mixed RAPTOR.
- 2 Attach the RAPTOR bottle to the U-POL UP0726 gun.
- 3 Adjust the air pressure on your compressor to 40-60 PSI.
- 4 Apply to the prepared surface with an even sweeping motion to obtain the desired texture.
- 5 If applying additional coats allow to flash off for 60 minutes between coats.

U-POL recommends that you spray a test panel with RAPTOR first to ensure the desired texture is achieved.

Rolling RAPTOR

- 1 Pour mixed RAPTOR into a suitable paint tray.
- 2 Apply using an open textured roller.
- 3 Cut in all corners and hard to reach areas with a brush.
- 4 Load roller with the product and apply slowly using medium pressure.
- 5 Rolling on RAPTOR results in a lower build. Additional coats will be necessary. When applying additional coats, observe 40 minute flash off period between coats.

Do not use in extreme cold or hot temperatures. Ideal application temperature is 68°F (20°C) with humidity of less than 60%.

Coats

U-POL recommends applying 2-3 coats of RAPTOR. More than 3 coats is not recommended.

MIL Build:
As applied using
UP0726 gun

1 Coat: 7.0 MILs 2 Coats: 12.0 MILs 3 Coats: 15.0 MILs
All measurements are approximate and are dependent on the application method.

RAPTOR TRUCK BED LINER - BLACK 2K PROTECTIVE POLYURETHANE COATING

Flash-off / min @ 68°F Wait 60 minutes between coats.

**IMPORTANT! Do not place heavy loads on the surface until RAPTOR is fully cured.
Please see dry times below.**

Drying Times

Touch Dry @ 68°F	Less than 1 hour
Light Duty @ 68°F	2-3 days
Regular Duty @ 68°F	5-7 days

Reducing flash off time, excessive film build and/or reduced temperatures will alter drying time.

Raptor should not be covered until it has fully cured which takes about 5-7 days. Covering Raptor with tarps or plastic sheeting before it has cured does not allow the solvents to escape and won't allow Raptor to fully cure.

Baking

RAPTOR can be baked for 30 minutes @ 140°F. Baking will speed up the initial cure, but it is still recommended that you wait 2-3 days for light usage and 7 days for heavy duty usage.

I.R. Cure

I.R. curing is not recommended

Over Painting

RAPTOR can be overpainted with most modern paint systems. When overpainting, prep the surface as follows:

- 1 Let sprayed RAPTOR dry for 24 hours.
- 2 Abrade with a fine abrasive pad.
- 3 Clean and degrease.

Equipment Cleaning

Clean spray gun in-between mixes. All equipment should be thoroughly washed immediately after use.

Shelf Life

2 years from date of manufacture in sealed original containers.

Storage

RAPTOR should be stored in cool, dry conditions in the original containers.

RAPTOR TRUCK BED LINER - BLACK 2K PROTECTIVE POLYURETHANE COATING

Properties & VOC Information

Data

Flash point	-0.4°F
Solid content without thinner	Approx 57 %
Specific weight	Approx 1.1

Chemical Resistance

- Diesel: No effect
- Petrol: Surface softening
- Xylene: Surface softening
- Hydraulic Oil: No effect
- NaOH: No effect
- Bleach: No effect
- Alcohol: No effect
- Horse urine: No effect

VOC Information

UP0820 RAPTOR Black 4L Kit

Frequently Asked Questions

Preparation

Q. Can RAPTOR be applied on top of a 2-part Epoxy Primer?

A. As long as the primer is fully cured, RAPTOR can be applied on top of a properly prepared and sanded 2-part epoxy primer.

Q. Can RAPTOR be applied on top of a basecoat?

A. RAPTOR can be applied on top of a basecoat. The basecoat must be fully cured and properly prepared and sanded before applying RAPTOR.

Q. Can RAPTOR be applied on top of a powder coat?

A. Yes, RAPTOR can be applied on top of a properly prepared and sanded powder coat.

Q. Can you use automotive paint tape with RAPTOR?

A. Yes, you can use automotive tape with RAPTOR. Wait between 15-20 minutes after applying RAPTOR before removing the tape.

Technical Properties

Q. How can I get a textured grip finish?

A. Add about ¼ - ½ cup per RAPTOR Bottle of clean/dry silica sand. Mix in the bottle and spray. If sand is added after RAPTOR is sprayed, the sand will not fully adhere and will eventually brush off.

Q. Can RAPTOR be reduced?

A. Yes, RAPTOR can be reduced up to 10%. When reducing RAPTOR, use a urethane based reducer.

Q. What is the gloss level of RAPTOR?

A. The gloss level of Black RAPTOR is approximately 10 gloss units, or a satin finish.

Q. What is the Shore Hardness of RAPTOR?

A. The Shore D value for fully cured RAPTOR is 85.

Q. Does RAPTOR contain any rubber?

A. No, there is no rubber in RAPTOR. RAPTOR is a thick polyurethane coating, which gives it great UV stability and impact resistance without the use of additives such as rubber.

Q. Is RAPTOR isocyanate free?

A. No, RAPTOR utilizes an isocyanate hardener.

Q. What is the maximum temperature after applied?

A. The maximum temperature after application is 185°F.
