50 - 60 μm

### Theoretical coverage

485 - 490 m<sup>2</sup>/l at 1 micron dry film thickness

Due to different Activator characteristics and different mixing ratios of the ready-to-use mixture in some TDS versions, the theoretical coverage calculation may vary.

Note: The practical material consumption depends on several factors, e.g. geometry of the object, surface formation, application method, spray gun setting, inlet pressure, etc.

S5000 HS TOP CLEAR can be overcoated with itself within 24 hours, without intermediate sanding

Clean after use with a suitable solventbased guncleaner.

#### Remarks

- Material has to be at room temperature (18-25°C) before use.
- · Allow additional time for preheating up to panel temperature.
- · Surplus ready for use material should not be returned to original can.
- · Elastification:

Add 10 % S7000 Flexible Additive to S5000, then mix 2:1 with HS Activator. Flash-off times could be affected. For spot repair & blending use S8100 BLENDING THINNER.
