Street Art

Street art emerged in the USA in the 1960s and has developed from a rebellious form of expression into a worldwide art movement. Originally created in the urban landscapes of large cities, many artists have turned street art into a recognised art form that immortalises social and political messages in impressive murals. Today, street art adorns the façades of cities all over the world and inspires onlookers with its creativity and expressiveness.

SATA is presenting a special highlight: An exclusive paint spray gun with a stunning street art design. This limited edition combines the energy and creativity of street art with the outstanding quality that has made SATA a leading in its field. This collector's item is not only a high-precision tool, but also an expression of art and craftsmanship that will be an eye-catcher in any workshop. It will also be the last special edition of the well-known SATAjet X 5500. Check it out and be inspired by the urban look!

The SATAjet X 5500 Street Art is unique and limited. It's available at your participating SATA dealer – while stocks last.

Note: The finishing process of the paint spray gun surface may result in different colour nuances. Permanent exposure to UV light or chemical cleaning agents, among other things, may also cause changes in the colour of the coating. The performance of the SATAjet X 5500 Street Art is the same as the performance of the SATAjet X 5500 series model.

The special-edition SATAjet X 5500 Street Art* is on offer in following nozzle sizes, as HVLP and RP versions and in standard or digital versions:

I-NOZZLE			O-NOZZLE			Clear Coat Edition	Special nozzle
